Boulder

# Outline

- What is Argovis?
- Examples of educational activities using
  - Argovis API
  - Argovis web interface
- Summary

## Argovis is a web app and database

The **goal**: make it easy for anyone (both scientists and non-scientists) to visualize and access co-located datasets using a browser or not

# What data are available

- Argo profiles\*, curated set
- Gridded Argo data\*\*
- Weather events, e.g. \*\*\*
- SOSE sea ice coverage
- Float trajectory forecasts by Chamberlain et al.
- ... *more to come in 2022!*

\* <http://doi.org/10.17882/42182>

\*\* Roemmich and Gilson, 2009

\*\*\* Guan and Waliser, 2015

# How to access and visualize data

- Visiting Argovis web pages at [argovis.colorado.edu](https://argovis.colorado.edu)

  - Argovis web interface
- Summary

***Interactive Jupyter notebook for hydrographic ocean  
data exploration, retrieval and visualization  
via the Argovis API***

Authors: Susanna Anil, Steve Diggs, Sarah Purkey, Donata Giglio, Megan Scanderbeg, Tyler Tucker

This notebook allows for a deeper look at the latest ocean data to explore scientific questions to better understand the Earth's climate.

By utilizing programming interfaces, like Jupyter notebooks, we aim to enhance students understanding of oceanography and coding fundamentals with interactive examples to explore our natural world through data, programming and visualization.

Choose an interface:

[Web interface](#)

[API](#)

## What education modules are available using the Argovis API?

This page features the available education modules that access the Argovis data via API, and usually, plot the returned data.

Please check out the [media](#) page for presentation slides on some of the educational modules listed below. Also, please visit the [API](#) pages to find example scripts to access the Argovis database via API.

For Jupyter Notebooks, click on [launch binder](#) to prepare the Notebook in your browser. It may take a few moments to load. When it has loaded, click on the file ending in '.ipynb' to launch the Python Notebook.

To understand what levels the education modules are aimed at, please use this legend:

■ high school ● undergraduate ▲ graduate

### Jupyter Notebook to plot Argo profile data from Argovis via API

● Authors: Susanna Anil, Steve Diggs, Sarah Purkey, Donata Giglio, Megan Scanderbeg, Tyler Tucker

**Description:** This Notebook introduces basic oceanography concepts and some basic programming concepts. Users access Argo profiles in a selected region and time. The profiles are then properly formatted, and their locations are plotted on a map. In addition, all profiles are plotted and users can choose plot axes for comparison of different parameters.

[Access to Notebook](#)

[Link to introductory slides:](#)

### Jupyter Notebook to plot path of Tropical Cyclones and nearby Argo floats via API

● Authors: Giovanni Seijo-Ellis, Donata Giglio, Sarah Purkey, Megan Scanderbeg, Tyler Tucker

**Description:** This Notebook introduces students to tropical cyclones, sea-ice and Argo datasets to explore air-sea interactions. Students co-locate the datasets with Argo profiles to explore different aspects of the climate system: ocean.

**Description:** This Notebook introduces students to tropical cyclones, sea-ice and Argo datasets to explore air-sea interactions. Students co-locate the datasets with Argo profiles to explore different aspects of the climate system: ocean.

You can run the notebook on the browser:  
no need to install anything!

***Interactive Jupyter notebook for hydrographic ocean data exploration, retrieval and visualization via the Argovis API***

**Learning Objectives**

1. Apply a structured approach to answer scientific questions about our natural world through data
2. Apply coding skills to access oceanographic data from state-of-the-art platforms
3. Produce graphs to visualize the data
4. Describe graphs of the data and what information we can extract from them

## Learning Objective #2

### Load ocean profile data for the region of interest

```
: #replace the following variables
startDate='2020-3-10'
endDate='2020-4-29'
presRange = '[0,500]'
shape = gulf_coords

# do not change code below
strShape = str(shape).replace(' ', '')
selectionProfiles = get_selection_profiles_loop(startDate, endDate, strShape, presRange)
selectionProfiles;
```

Users select:

- Start and end date
- Pressure range
- Region to examine

Some preset regions >

```
#options for regions to examine
south_coords = [[[-149.238281,-36.456636],[-141.879737,-37.077133],[-134.445218,-37.237608],
[-127.024817,-36.93345],[-119.707031,-36.173357],[-120.058594,-59.977005],
[-127.546527,-60.582449],[-135.216859,-60.756782],[-142.865732,-60.492308],
[-150.292969,-59.800634],[-149.238281,-36.456636]]]
gulf_coords = [[[-94.35249,27.365753],[-97.097603,24.402577],[-93.332877,20.489146],

[-94.35249,27.365753]]]
pacific_coords = [[164.355469,29.840644],[164.882812,-29.840644],[172.623113,-29.990522],
[-180,-29.701812],[-180,-29.701812],[-179.648438,-29.688053],
[179.648437,29.688053],[172.007811,29.985384],[164.355469,29.840644]]]
atlantic_coords = [[[-40.078125,29.840644],[-33.368671,30.338837],[-26.614528,30.492027],
[-19.863281,30.297018],[-20.039063,-30.145127],[-26.724822,-30.384017],
[-33.419918,-30.281826],[-40.078125,-29.840644],[-40.078125,29.840644]]]
labrador_coords = [[[-144.84375,36.031332],[-136.038755,36.210925],[-127.265625,35.746512],
[-128.144531,22.755921],[-136.543795,24.835311],[-145.195313,26.431228],
[-144.84375,36.031332]]]
```

Guiding questions:

1. Describe your study region. Would you best describe your region as polar, subpolar, or tropical?
2. What is a mixed-layer? Would you expect shallow or deep mixed-layers in your study region?

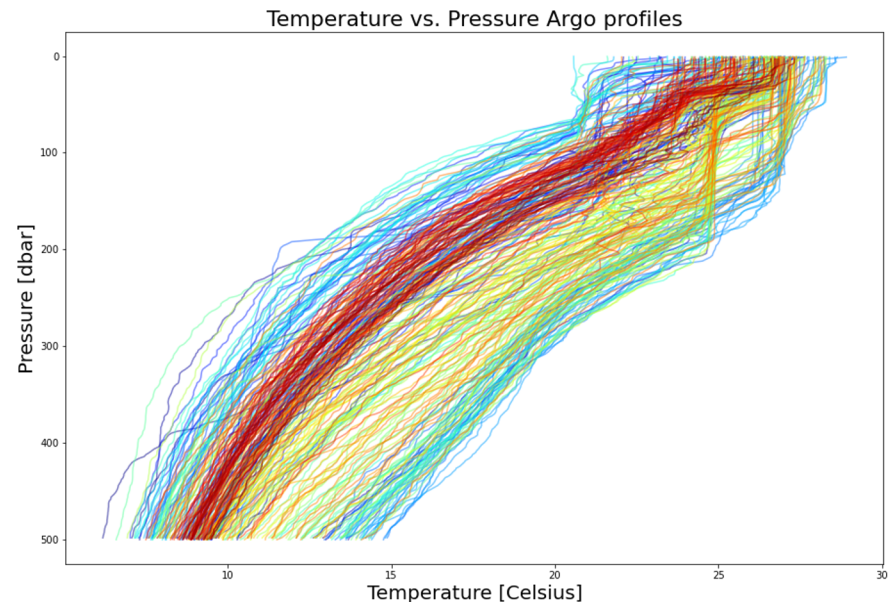

## Learning Objective #3, #4

### Example: Plot property vs property using widgets

Users select:

- X-variable: temperature, pressure, or salinity
- Y-variable: pressure, temperature, salinity, longitude or latitude
- Z-variable (what to group the variables by): profile ID, day, year or month

X-variable	Temperature	▼
Y-variable	Pressure	▼
Z-variable	Profile ID	▼

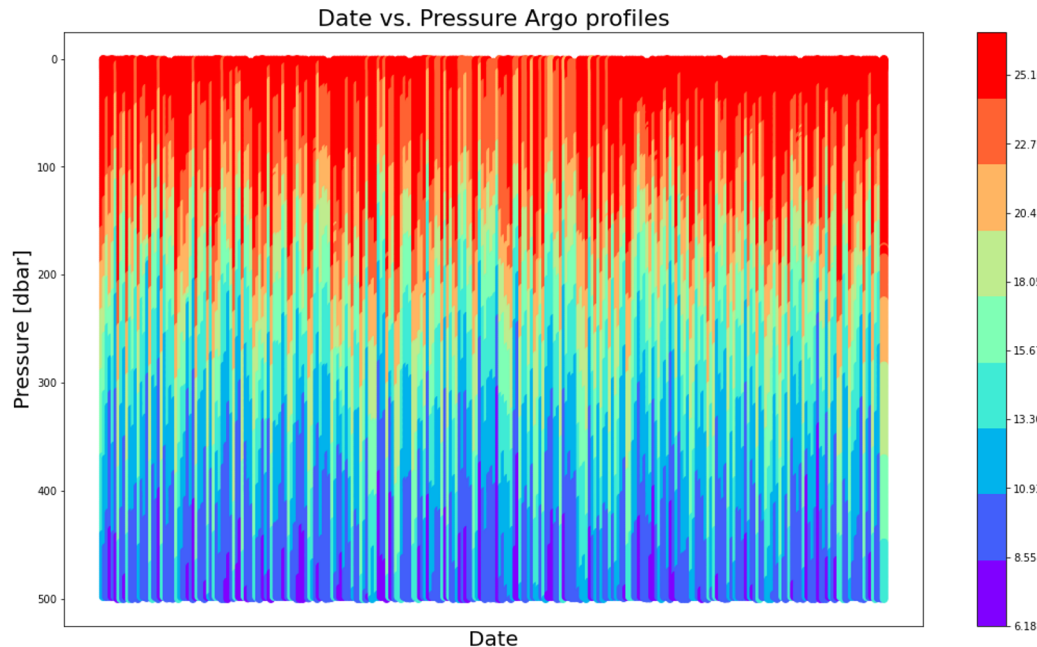

Guiding questions:

1. **With the property plot function, plot temperature vs pressure. What is the mixed layer depth? Does it vary in time? If so, how?**
2. **Now plot salinity vs pressure, do any of your above answers change. Why or why not?**

## Learning Objective #3, #4

### Example: plot temporal variability of subsurface data

Users select:

- X-variable: time, longitude, or latitude
- Z-variable: temperature or salinity
- Number of intervals

Y-variable is set as pressure

X-variable  ▼

Z-variable  ▼

num\_ints  10

y\_col

Guiding questions:

1. **Do properties vary in time in the subsurface?**
2. **Now, pick a different region in the ocean and answer again all the questions. How is this region different or the same?**

***Interactive Jupyter notebook for hydrographic ocean data exploration, retrieval and visualization via the Argovis API***

This interactive notebook features:

- Easy to understand parameter modifications suitable for beginner to intermediate Python programmers
- Widgets for user-specifications and instant replotting of features
- Engaging discussion questions to help interpret the content produced by graphs

# Outline

- ✓ What is Argovis?
- Examples of educational activities using
  - ✓ Argovis API
    - Argovis web interface
- Summary

***Exploring the evolution of the mixed layer depth  
using the Argovis web interface***

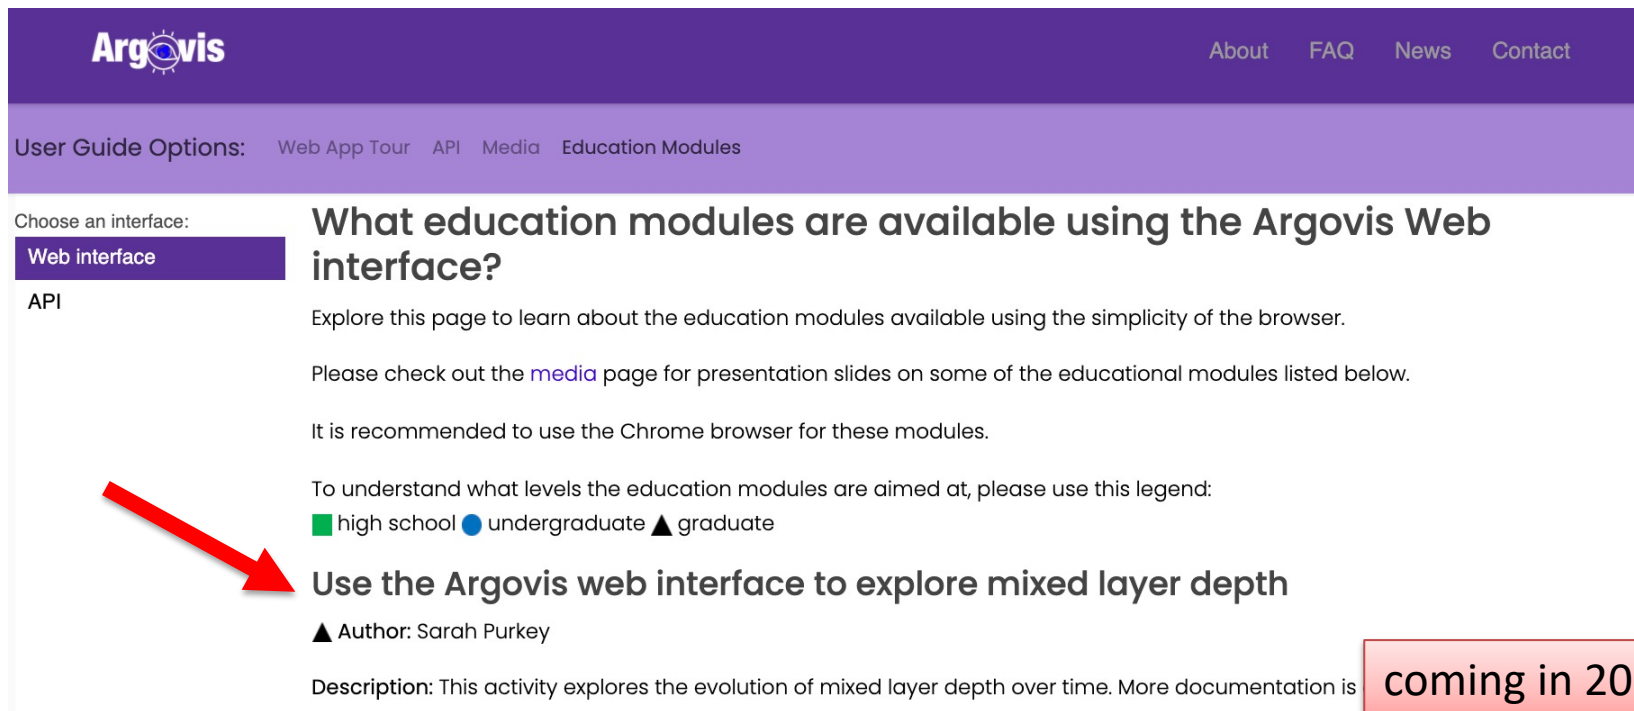

Author: Sarah Purkey

**Learning Objectives**

1. Identify the mixed layer, thermocline, thermocline, halocline, minimum and maximum in ocean profiles.
2. Describe the variability in mixed layer depth and properties

# *Exploring the evolution of the mixed layer depth using the Argovis web interface*

Author: Sarah Purkey

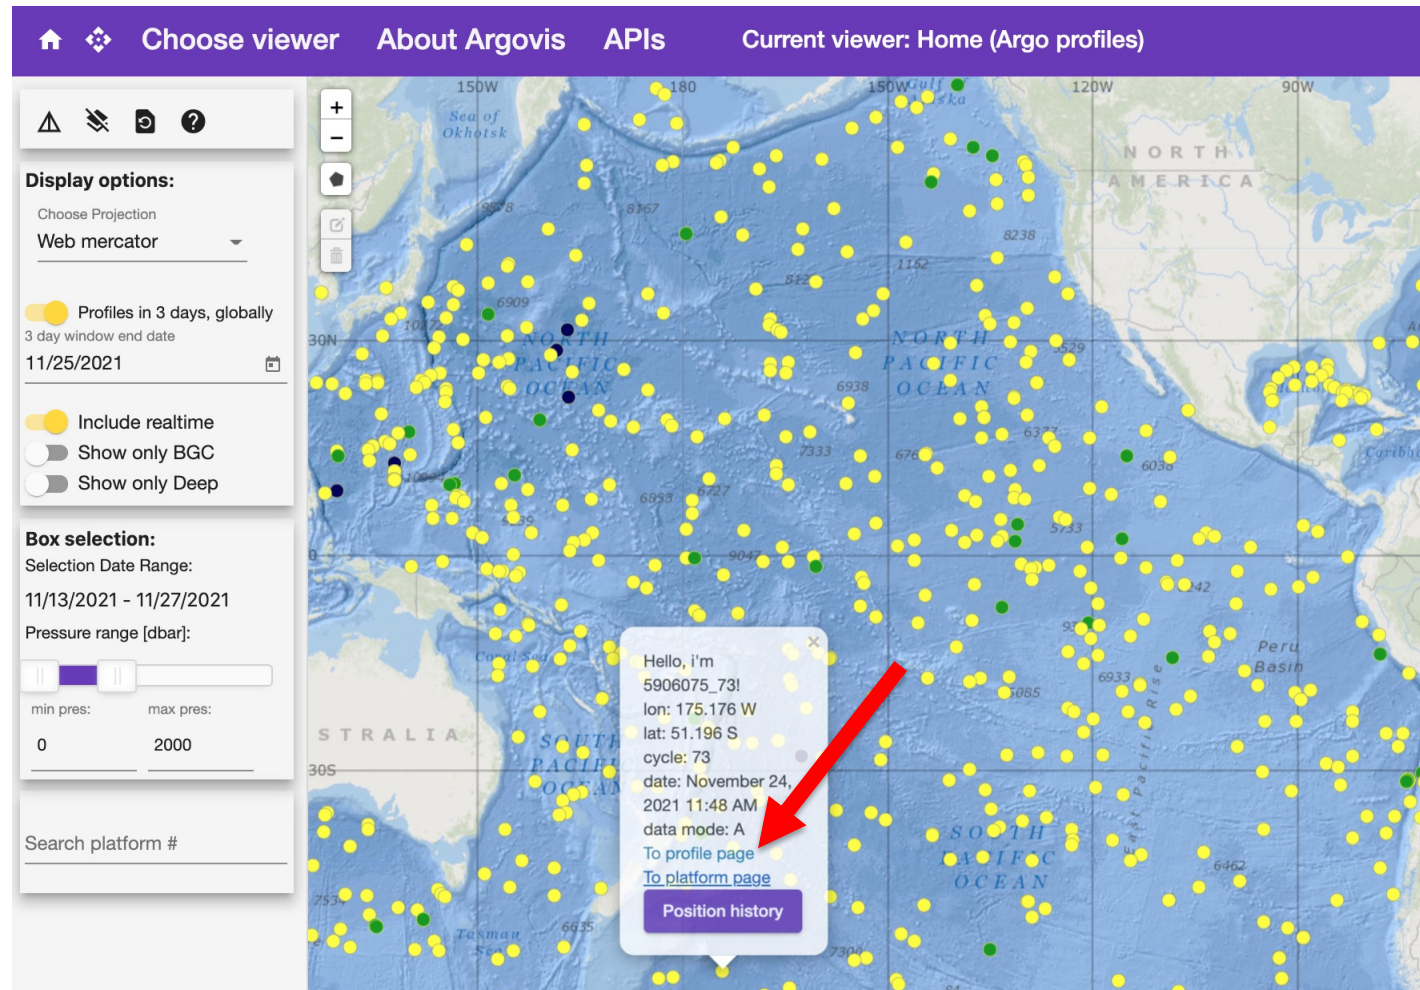

A screenshot of the Argovis web interface. The top navigation bar is purple with the Argovis logo on the left and links for "About", "FAQ", "News", and "Contact" on the right. Below this is a lighter purple bar with "User Guide Options:" followed by links for "Web App Tour", "API", "Media", and "Education Modules". The main content area has a sidebar on the left with "Choose an interface:" and two options: "Web interface" (highlighted in a dark purple box) and "API". The main content area displays a page titled "What education modules are available using the Argovis Web interface?". The page text includes: "Explore this page to learn about the education modules available using the simplicity of the browser.", "Please check out the [media](#) page for presentation slides on some of the educational modules listed below.", "It is recommended to use the Chrome browser for these modules.", "To understand what levels the education modules are aimed at, please use this legend: ■ high school ● undergraduate ▲ graduate". A red arrow points from the bottom left towards the heading "Use the Argovis web interface to explore mixed layer depth". Below this heading is the author information "▲ Author: Sarah Purkey" and a description: "Description: This activity explores the evolution of mixed layer depth over time. More documentation is". A red box in the bottom right corner contains the text "coming in 2022".

coming in 2022

# Learning Objective #1

Visit

[argovis.colorado.edu](http://argovis.colorado.edu)

Guiding question:

1. Click through a few dots and look at the profile page. Identify the mixed layer, thermocline, thermostad, halocline, minimum and maximum in ocean profiles.

# Learning Objective #1

## Ocean structures and vocabulary

Thermocline /  
Halocline

Thermo-/halostads

Salinity Max

Salinity Min

Temp Min

Temp Max

Mixed Layer Depth = 40dbar (approx)  
 Temperature (avg) = 15 degC  
 Salinity (avg) = 35.6psu

Guiding question:

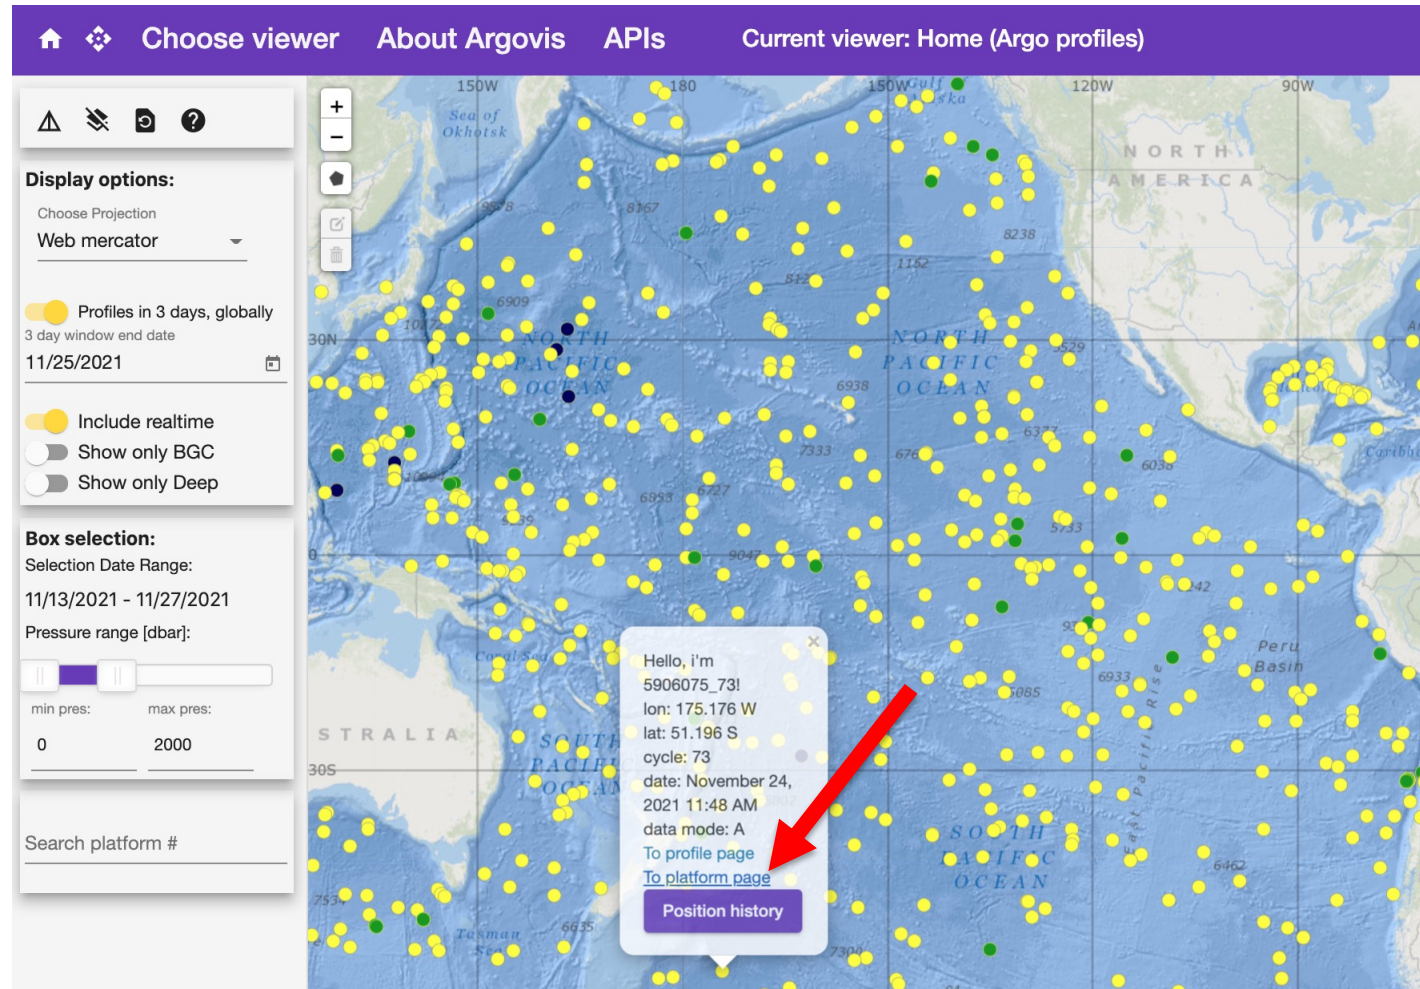

1. Click through a few dots and look at the profile page. Identify the mixed layer, thermocline, thermostad, halocline, minimum and maximum in ocean profiles.

# Learning Objective #2

Visit

[argovis.colorado.edu](http://argovis.colorado.edu)

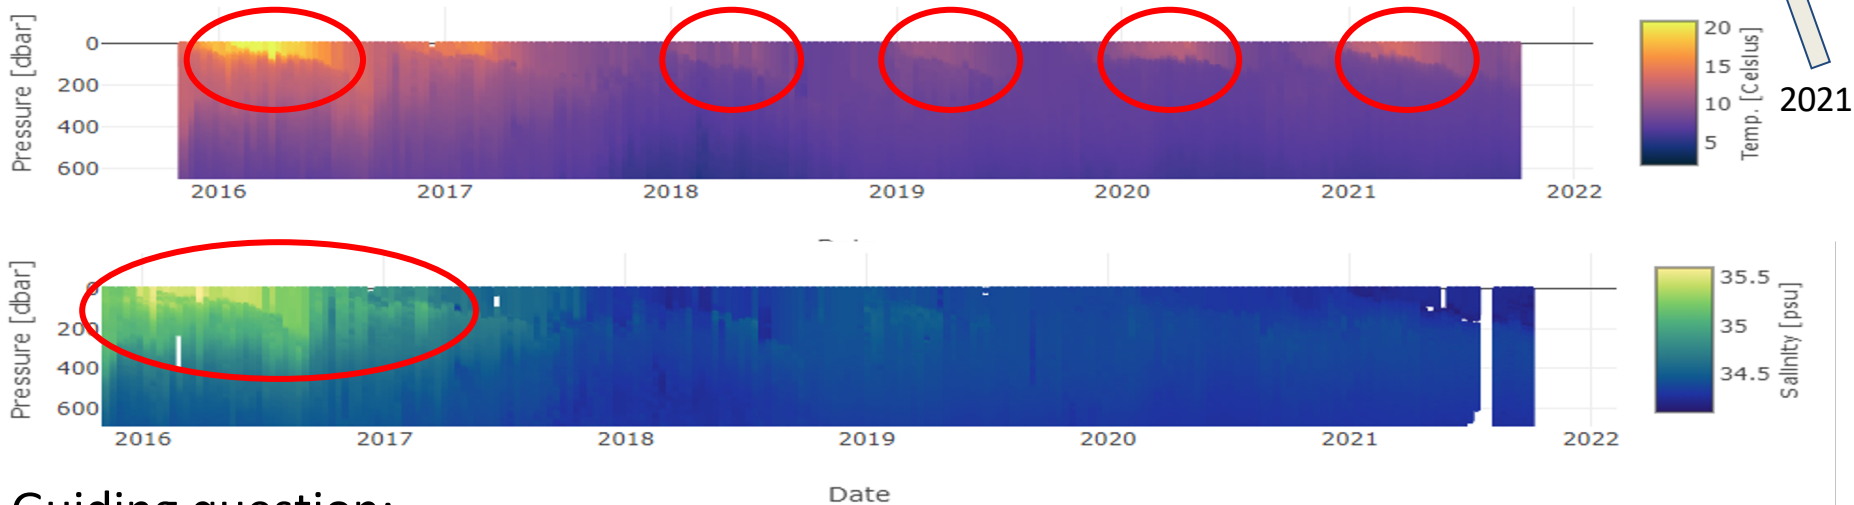

Guiding question:

1. Click through a few floats and look at the platform page. Zoom in to the upper 500 m of the salinity and temperature plots. Can you identify variability in the mixed layer depth? You may need to look at a few floats to find a good example.

## Learning Objective #2

Explore spatial and seasonal temporal variability in the temperature and salinity profiles measured by the floats in different oceanographic regimes.

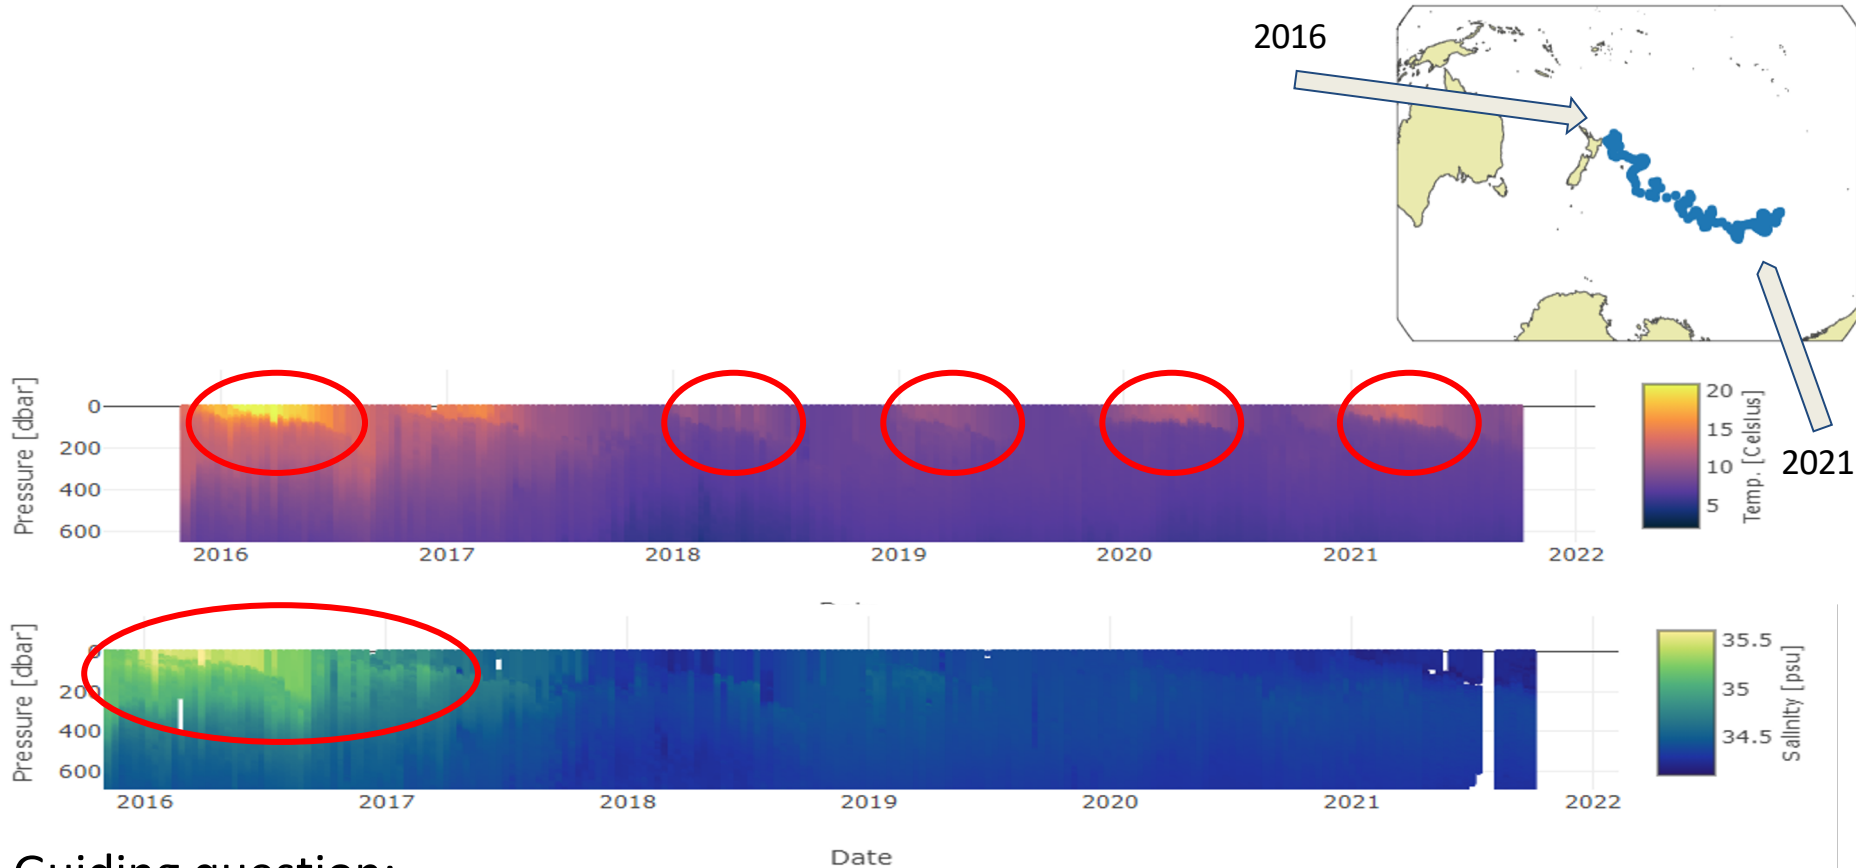

Guiding question:

1. **Click through a few floats and look at the platform page. Zoom in to the upper 500 m of the salinity and temperature plots. Can you identify variability in the mixed layer depth? You may need to look at a few floats to find a good example.**

# Learning Objective #2

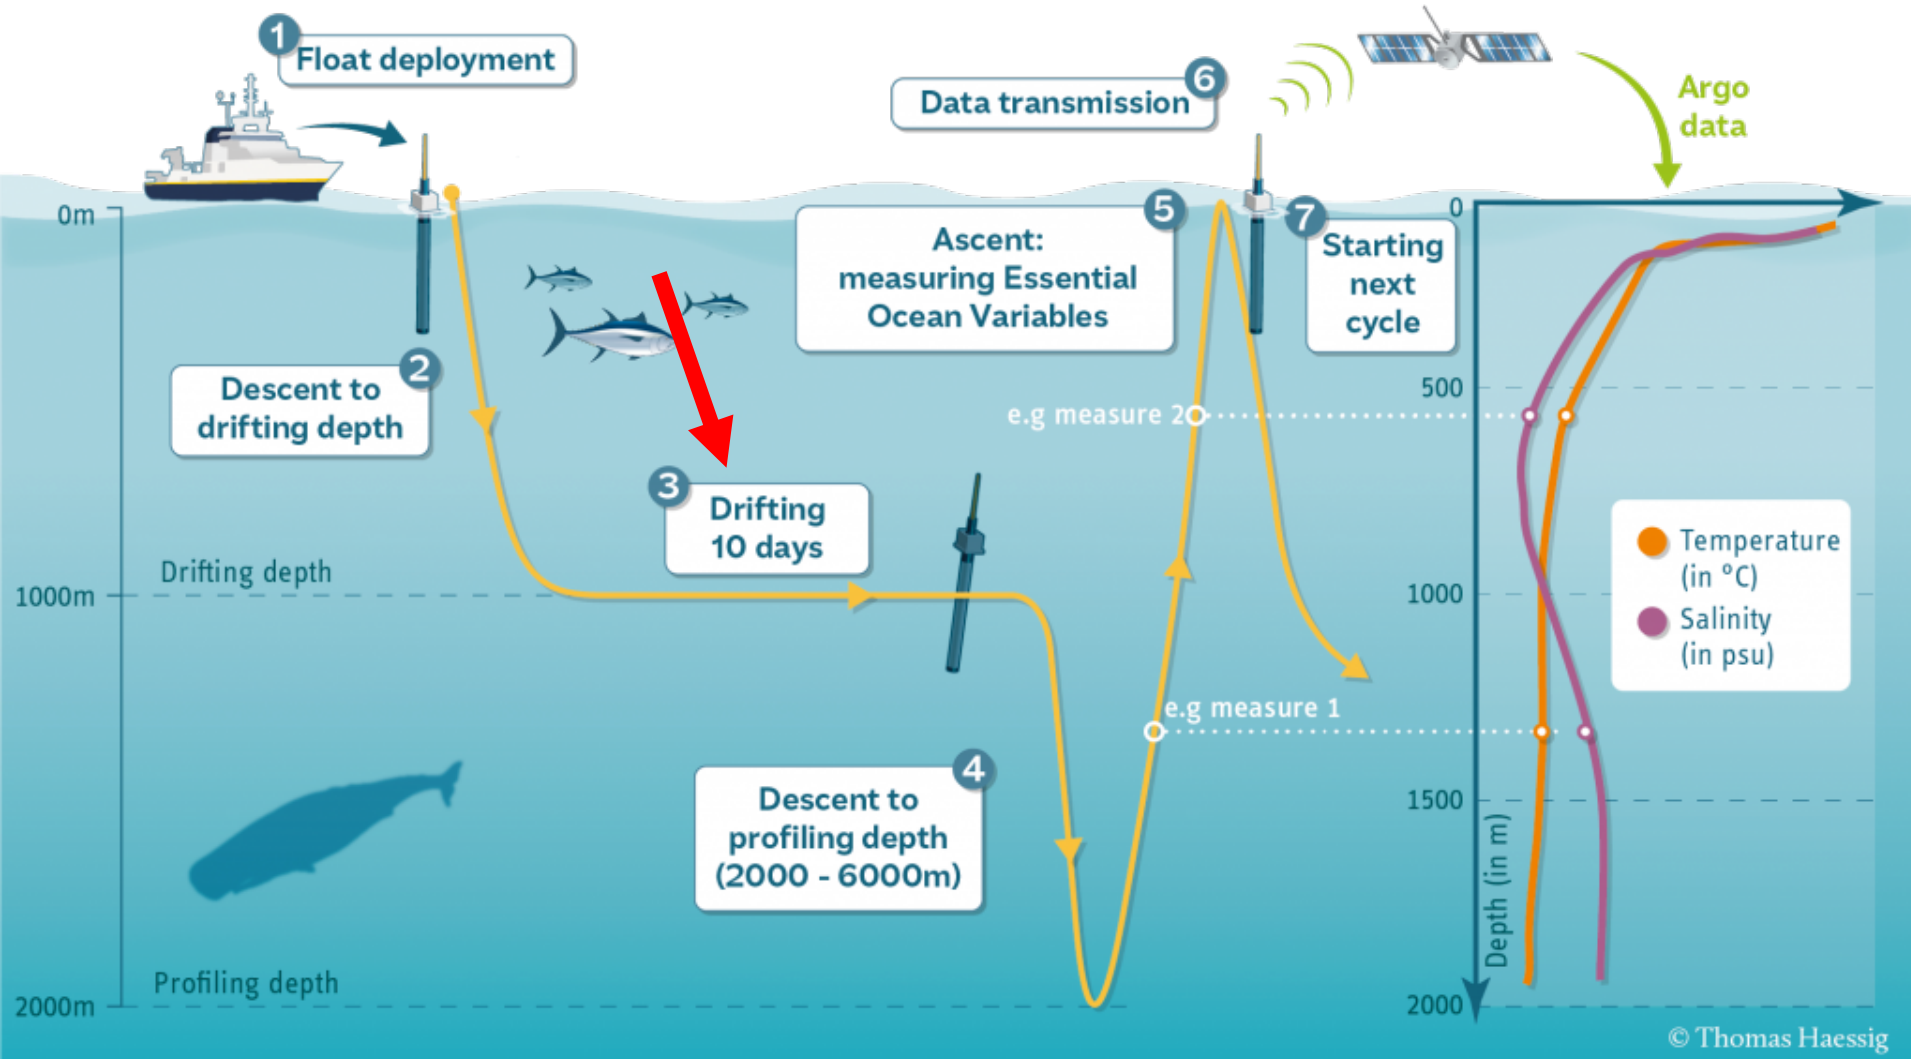

Guiding question:

2. **Can you describe what is happening? Does the variability in the mixed layer depth correlate to a temporal variability or spatial (look at float position by cycle number on profile page and note the date of the profile)?**

# Outline

- ✓ What is Argovis?
- Examples of educational activities using
  - ✓ Argovis API
    - Argovis web interface
      - Clicker question: an example relevant for ocean currents
- Summary

Argo floats move with ocean currents at ~1000m.

Visit the Argovis web app at [argovis.colorado.edu](http://argovis.colorado.edu)

Search platform #

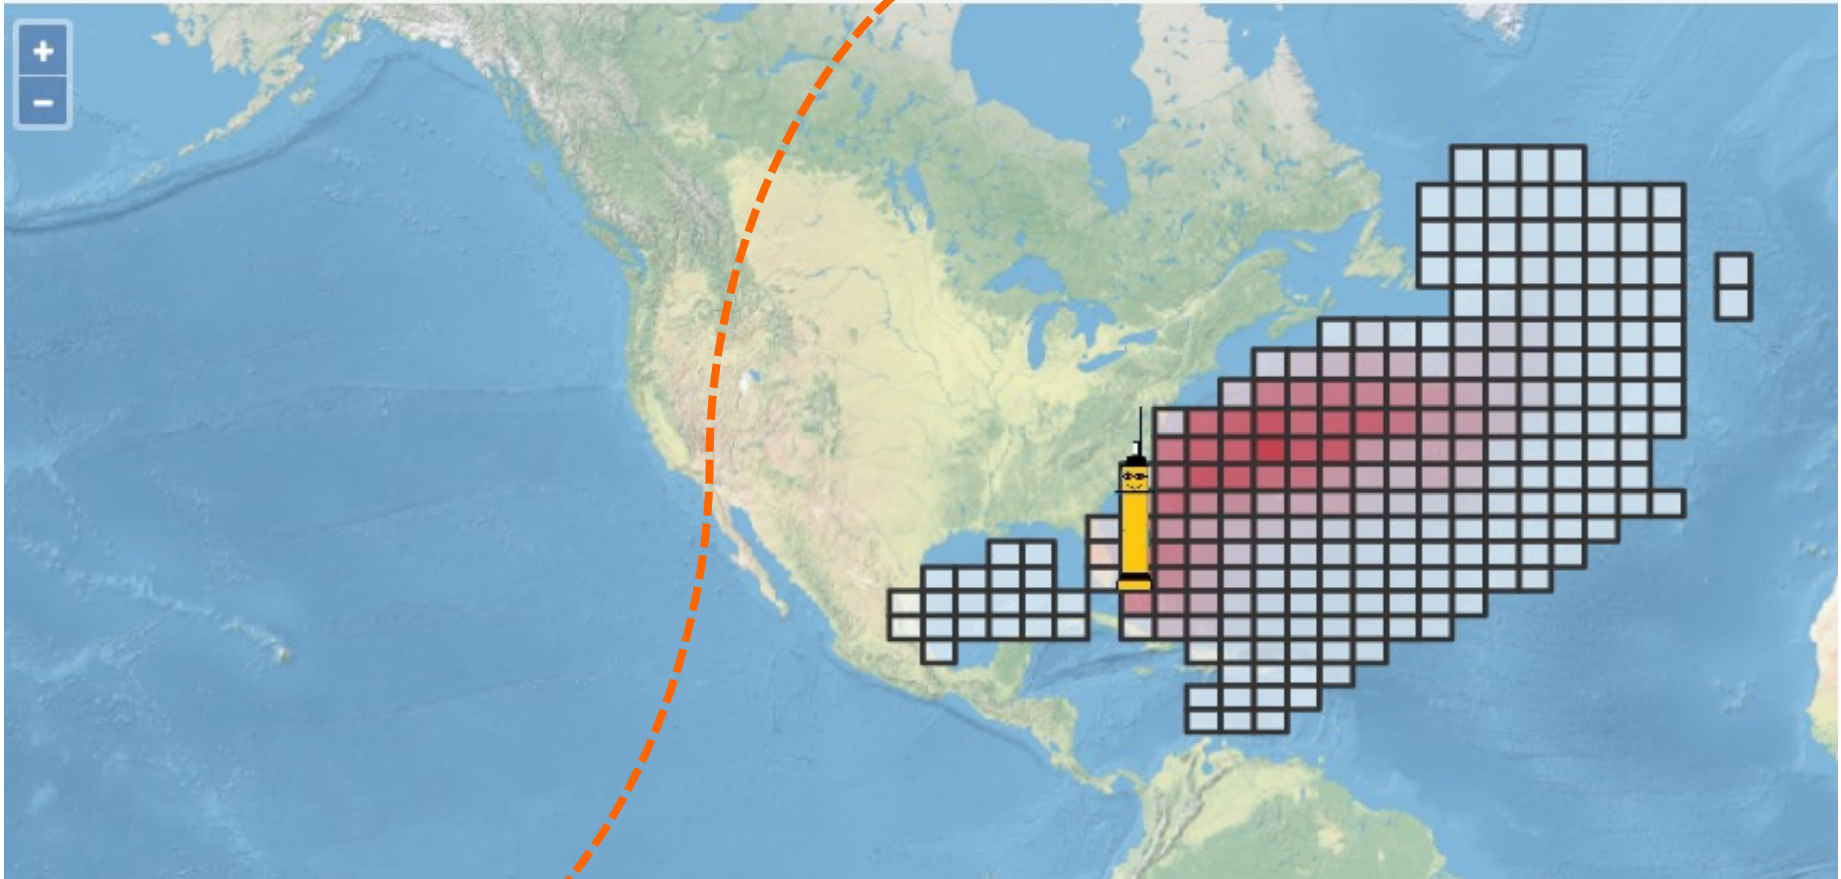

Visit the Argovis web app at [argovis.colorado.edu](https://argovis.colorado.edu)

Click on "Choose viewer", then "Float Trajectory Forecast", then click on the map (anywhere in the ocean)

Spherical Mercator (EPSG:3857)

480 days

Colors change from white to red based on how likely it is for the float to end up there after 480 days. Red is more likely.

Visit the Argovis web app at [argovis.colorado.edu](https://argovis.colorado.edu)

Click on "Choose viewer", then "Float Trajectory Forecast"

Spherical Mercator (EPSG:3857)

480 days

**Question:** If a float is deployed at the location of the red cross, where is it more likely to end up after 480 days?

**A** North-West

**B** North

**C** North-East

**D** South

Visit the Argovis web app at [argovis.colorado.edu](http://argovis.colorado.edu)

480 days

Colors change from white to red based on how likely it is for the float to end up there after 480 days. Red is more likely.

# Summary

- Argovis can be used for research, outreach, and educational activities
- Educational activities are available at [https://argovis.colorado.edu/docs/Argovis\\_EdModule.html](https://argovis.colorado.edu/docs/Argovis_EdModule.html)
- A user guide is available on the website at [https://argovis.colorado.edu/docs/Argovis\\_User\\_Guide.html](https://argovis.colorado.edu/docs/Argovis_User_Guide.html)
- Stay tuned for more datasets and activities!
- User guide and educational activities will be upgraded with the new release of Argovis (in 2022)
- Please reach out if you have any questions!  
[https://argovis.colorado.edu/docs/Argovis\\_About.html#contact](https://argovis.colorado.edu/docs/Argovis_About.html#contact)
